

# Manual and Automated Safety Curtains for Welding Cells

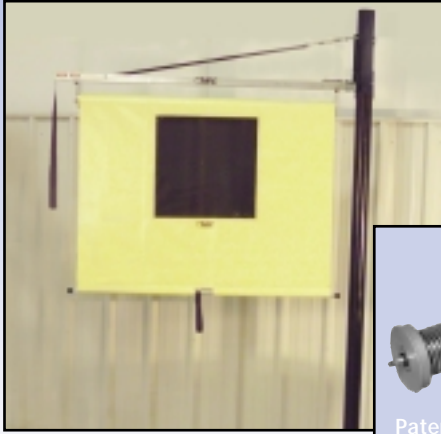

Your Local Distributor:

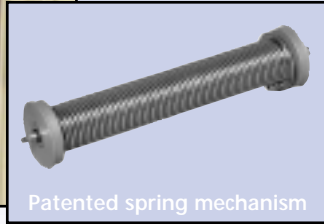

- Easy to install and easy to operate.
- Built with industrial components for long-life.
  - Wide variety of fabrics and materials available.
  - Standard models available for quick delivery.
  - Custom designs can meet your exact needs.

# Manual Roll-up Curtains

REQUEST  
BULLETIN  
#261

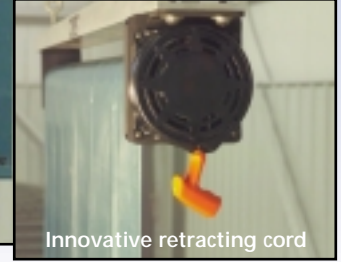

Patented spring mechanism

## Industrial Ratchet-Lock™ Shade Curtain

Reliable pull-down / wind-up curtain uses patented industrial spring design. All metal components give long-life and trouble-free operation. You pull the curtain down to unwind. To retract - you simply tug the bottom of the curtain with a short pull and release the locking ratchet. The curtain rolls-up with a controlled spring action. (Like a window shade - only better!)

REQUEST  
BULLETIN  
#262

Innovative retracting cord

## Innovative Zip-Pull™ Roll-up Curtain

Fast-action pull-down / wind-up curtain uses unique zip-pull™ retracting cord. You pull the curtain down to unwind. To retract - you simply grab the Zip-Pull™ cord with handle and pull. The curtain quickly rewinds and the cord disappears back into its housing. Easy to install using optional floor post, wall mount, or hanging bracket. (Patents Pending.)

# Motorized Doors and Curtains

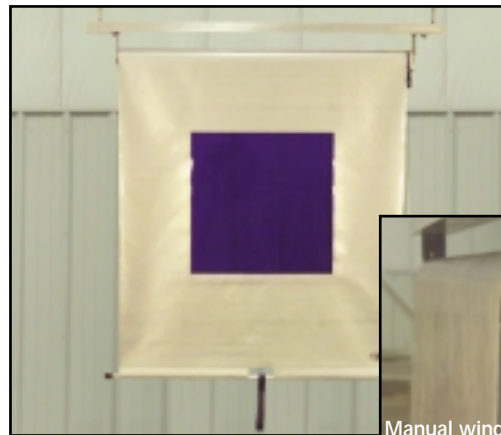

REQUEST  
BULLETIN  
#263

Optional push-button station

## Heavy-Duty Motorized Door

Ideal for automated or robotic welding cells. Fast up/down speeds and customized designs meet your toughest applications. Rugged construction with high duty cycle components for heavy production environments. Many options available: electrical controls, see-through windows, support frames, cross bars, resistant fabrics, metal doors, etc.

REQUEST  
BULLETIN  
#264

Manual wind-up feature is built-in

## Light Duty Motorized Curtain

The convenience of motorized operation at the price of a manual shade! This self-contained motorized unit runs on 110v and is ready to operate out of the box. It is ideal for lower duty cycle manual or semi automatic work cells where up/down speed is less important. The fully self contained unit includes motor, adjustable limit switches, "up-down-stop" toggle switch, and plug-in power cord.
