

Wipers

For Machine Tools and Industrial Equipment

Custom Shapes

Custom shapes are easy with our patented molding process. Milwaukee Protective Covers supplies wipers made to your drawings in quantities as low 100 pieces. For smaller quantities, it is possible to adapt one of our existing molds to fit your design.

Standard Strips

Milwaukee Protective Covers has standard strips for your mounting. Fourteen profile cross-sections are available ranging from 0.30" (7.5mm) tall to 2.25" (57mm) tall. All strips have a metal face plate for rigid mounting and easy cutting and drilling. Standard length is 22 inches (560mm).

Available Shapes

Milwaukee Protective Covers has many shapes available. We have molds for "L" and "C" shapes, rounds for wiping shafts, and threaded rounds for wiping ball-screws and Acme threads. Contact our applications engineers with your needs.

Durable Construction

All wipers are a single piece construction with a metal facing plate. The construction is rigid and strong for long-life. Wipers can be molded with or without mounting holes, clamp bushings, or other features — according to your needs.

Resistant Material

We use specially formulated natural and synthetic rubber compounds to make our industrial wipers. The compounds resist oils, coolants, chips, and other contamination. Please ask us if you have special needs. We can formulate the best compound for your application.

Ordering Information

Please provide the following information:

- Drawing of the surface to be wiped.
- Mounting information.
- Requirements for overall external dimensions.
- Information about the contamination contacting the wiper.
- Information about the environmental conditions.
